Professional Summary

Cloud and DevOps Engineer with 6+ years of experience building, automating, and operating reliable cloud platforms. Strong focus on Infrastructure as Code (Terraform, AWS CDK), CI/CD automation, system design, and security-aware operations. Hands-on experience with AWS, Kubernetes, Linux systems, networking, and monitoring. Proven ability to design scalable, highly available architectures, standardize deployments, and cut manual work. M.Sc. Cybersecurity candidate at Politecnico di Torino.

Experience

Cloud and DevOps Engineer, Arzamed

Mar 2026 – Present

Turin, Italy

- Architected and built a greenfield AWS platform for a healthcare SaaS using Infrastructure as Code (AWS CDK): a multi-account, multi-environment design with a private Amazon EKS cluster, Aurora PostgreSQL, ECR, Secrets Manager, and CloudFront/S3 static sites — cutting environment provisioning time by 70% and eliminating configuration drift.
- Implemented GitOps continuous delivery for 30+ microservices with Argo CD and Helm, reducing manual release steps by 80% and enabling same-day rollbacks.
- Set up monitoring and alerting on Amazon CloudWatch (dashboards, metric-based alarms, SNS email/SMS notifications), lowering mean time to detect incidents by 40% and cutting observability costs by 30% through instrumentation tuning.
- Delivered a public external API from scratch — Amazon API Gateway with VPC-linked routing, token- and key-based authorizers, per-tenant rate limiting, and throttling — opening a new integration channel for third-party partners.
- Built API-key management and usage-based billing (quota tracking, threshold alert emails, Stripe checkout/webhook integration for plan changes and renewals), enabling a new metered revenue stream.
- Hardened authentication with Amazon Cognito (enforced MFA, scoped access, IRSA workload identity) and branded Amazon SES email templates for verification and one-time passwords.
- Provisioned a WAF-protected developer portal on CloudFront/S3 and authored its bilingual (IT/EN) API documentation.

DevOps Engineer, Torob

Nov 2022 – Present

- Designed and operated AWS cloud environments with a strong focus on automation, reliability, and controlled deployments.
- Implemented Infrastructure as Code using Terraform (modular design, state management, versioning) to provision and manage AWS resources, reducing provisioning time by 60%.
- Built and maintained CI/CD pipelines (Jenkins, GitLab CI, Git-based workflows), cutting deployment time by 40% and enabling safe rollouts and rollbacks across environments.
- Standardized deployments across dev/test/prod, eliminating configuration drift and supporting sustained 99.9% service availability.
- Implemented monitoring and alerting using Prometheus, Grafana, and CloudWatch, reducing mean time to resolution by 25%.
- Managed Linux systems, networking, TLS certificates, reverse proxies, and access controls.
- Collaborated closely with development teams in agile environments to improve delivery and platform reliability.

DevOps Engineer, KiTalent (Part-time)

Sep 2025 – Nov 2025

Turin, Piedmont, Italy

- Designed and operated containerized environments using Docker.
- Automated environment provisioning and deployment workflows to reduce manual intervention.
- Implemented ingress and routing using Traefik, including secure access and environment separation.
- Improved operational stability through health checks, restart policies, and configuration standardization.

Network Operations Center Engineer, Shatel

Jul 2020 – Sep 2022

- Operated and monitored production systems and networks with high availability requirements.
- Performed troubleshooting, incident analysis, and root-cause investigations.
- Managed networking components including routing, firewalling, and secure access.
- Maintained operational documentation and standard procedures.

Technical Support Specialist, Shatel

Jun 2018 – Jul 2020

- Provided Linux and system-level support for internal and customer-facing platforms.
- Resolved complex incidents under time pressure while maintaining service quality.
- Documented recurring issues to improve operational efficiency.

Education

Politecnico di Torino, Master's in Cybersecurity (Candidate)

Sep 2024 – Jul 2026

Azad University, Bachelor of Computer Software Engineering

Sep 2014 – Apr 2018

Skills

- Cloud platforms: AWS (EKS, EC2, VPC, IAM, S3, RDS/Aurora, Lambda, API Gateway, CloudFront, Route 53, CloudWatch, Cognito, SES, SNS, WAF)
- Infrastructure as Code: Terraform (modules, state, workspaces), AWS CDK
- CI/CD and GitOps: Jenkins, GitLab CI, GitHub Actions, Argo CD, Helm
- Containers and orchestration: Kubernetes (CKA certified), Amazon EKS, Docker
- System design: scalable, highly available distributed systems; multi-account/multi-environment architecture; capacity planning and cost optimization; failure-domain isolation
- Scripting and automation: Bash, Python
- Linux administration and troubleshooting
- Networking and security fundamentals (IAM/RBAC, DNS, TLS, VPCs, security groups, firewalls, WAF)
- Monitoring and observability: CloudWatch, Prometheus, Grafana, OpenTelemetry

Certifications

- AWS Certified DevOps Engineer — Issued Dec 2023
- Certified Kubernetes Administrator (CKA) — Issued Aug 2024
- CompTIA Security+ — Issued Jul 2024
- Linux Professional Institute LPIC-2 — Issued Aug 2022
- Linux Professional Institute LPIC-1 — Issued Jun 2020
- Cisco Certified Network Associate Security (CCNA) — Issued Sep 2018
